## What Professionals Say About Surgery with COOLSHIRT

*"If you're working and you know that you have a two-hour case ahead of you, [COOLSHIRT] makes you feel secure that it will keep you comfortable throughout the procedure. Not only for our comfort, but for the patient's benefit as well. I would say, 'Don't go into the operating room without it.'"*

J. Carl Sutton, MD  
Orthopaedic Surgeon  
Henry Medical Center, GA

*"My surgeon who wears this has never complained one day since I purchased this unit. I just had to let you know and thank you for the product and your wonderful service."*

Sherrie Goodwin, RN  
Surgical Services Director  
Meadowview Regional Medical Center,  
Kentucky

*"Our surgeon said that he felt he had more energy at the end of the day after wearing one."*

University of Minnesota Medical  
Center, Fairview

*"The cooling vests have made a huge difference with the surgeons, keeping them completely comfortable during long and short cases."*

Tammy Byers  
Sr. Cost Specialist  
Kaiser Permanente

## Top Products for Surgeons and Hospitals

Systems work with both disposable and reusable garments, giving operating rooms greater control over cost and contamination.

### [Dual COOLVEST](#)

A complete cooling system for the OR

Lightweight, medical-quality ventilated nylon gives surgeons freedom of movement.

### [ProCool M](#)

Our top iceless cooling / heating product

"M" works with most COOLSHIRT garments and has a compact, hospital-grade build.

### [MOBILECOOL BP2](#)

A light, portable backpack system

The comfortable, self-contained BP2 provides surgeons with targeted cooling therapy.

## What Can I Do to Cool Down in the OR?

Because of the lengthy and physical demands of surgery, many operating rooms are cooled for surgeon comfort. However, unplanned hypothermia presents serious risks to patients.

The Association of periOperative Registered Nurses (AORN) [notes](#), "When a large surface area must be exposed for the surgical procedure, forced air warming may not be sufficient. For these patients, the severity of hypothermia may be reduced by raising the room temperature to **more than 23°C (73.4° F)**. In orthopedic procedures, normothermia was successfully maintained without forced air warming when the room temperature remained **above 26°C (78.8°F)**."

While warm temperatures can protect patients from the risk of hypothermia, these conditions can cause doctors to...

- Become overheated, reducing their efficiency in surgery.
- Perspire, making it more difficult to handle instruments.
- Lose focus during lengthy operations.

Doctors may already be familiar with cooling options like evaporating neck wraps, ice packs, and air-blowing systems. However, each has its drawbacks, such as limited duration, weight, and limited effectiveness.

**Water transfers heat more than 20 times faster than air.** That's why COOLSHIRT's garments integrate up to 60 feet of thin, non-kink tubing with cooling liquids. Our products promote the surgeon's comfort even in environments approaching 95° F, and our premium systems are UL-graded for use in the operating room. We invite you to learn more about our solutions.

Sr. Cost Specialist  
Kaiser Permanente

## How Should I Choose a Cooling Solution?

Whether you are a surgeon who wants greater comfort during lengthy procedures or a hospital representative who wants to help surgeons avoid fatigue and heat-related mistakes, there are several factors to consider in a cooling solution.

### Effectiveness

The most important question that surgeons want answered is, "Will this product keep me cool and comfortable during procedures?"

COOLSHIRT proves its value with:

- Thousands of customer success stories.
- Years of service to medical professionals.
- Leadership in other industries where performance is essential.

### Safety

The safety of the patient and surgeon should be the highest priority with any cooling solution.

- All electrical components in ProCool M are UL-listed, and our premium dual and single systems are the only cooling garments graded for medical safety (60601.1), a rating that we received after nearly five years of testing.
- Because surgeons can work efficiently and comfortably with COOLSHIRT, ORs can remain at AORN and Joint Commission-recommended temperatures, helping prevent unplanned hypothermia.

### Mobility

Surgical teams need to be able to move around unfettered within the operating room.

In response, we have designed COOLSHIRT systems to use a small footprint, and our cooling garments:

- Attach with an 8-to-20 foot hose using fast, non-drip disconnects--the same style used in our motorsport products, where speed is essential.
- Weigh only about one pound when in use.

### Return on Investment

The solution that you purchase must deliver value to your work and your organization.

COOLSHIRT systems offer significant value to customers, both because of the benefits they provide and their affordable cost:

- More comfortable, less fatigued surgeons may work more efficiently.
- Improving the surgeons' experience can help facilities attract and retain talent.
- COOLSHIRT includes an industry-leading five-year warranty on premium systems.
- Our sales team can work within your hospital's capital purchasing restrictions.

**Whatever interests are driving your purchase, COOLSHIRT SYSTEMS can help you get the most from your investment.**

## How Does the COOLSHIRT Free Trial Work?

COOLSHIRT will provide surgeons and hospitals with a system to use for a free trial evaluation. We make the trial process as simple as possible so that you can experience the benefits our products offer:

- There is zero cost to try a COOLSHIRT solution.
- We only request a no-charge purchase order or credit card binder.
- You receive 30 days to test out COOLSHIRT.

If you recognize the value that our system provides in your operating room, you can choose to make a purchase--or, return the system at no cost except for shipping.

Have questions? Please get in touch, and our team would be happy to assist you.
