## WHY ECKER?

"Businesses choose Ecker Construction because we prioritize client relationships. Our project managers offer exceptional service to owners, developers, architects, and corporate construction managers.

We also have years of experience in commercial construction and specialty industries, and we use this expertise to plan projects and solve challenges effectively.

Just as importantly, we value precision and quality. With conceptual estimating and careful budget preparation, we are able to deliver work that is attractive, cost-effective, and on time.

We look forward to providing these services to your business."

— Dave Ecker, President

## ABOUT ECKER CONSTRUCTION: AN EXPERT COMMERCIAL CONTRACTOR

Ecker Construction, founded in 1997, is an experienced commercial contractor serving local, regional, and national businesses. We provide cost-effective construction solutions for specialty industries that exceed our clients' expectations.

Companies choose us for their projects because we provide...

### Expertise across industries.

Ecker Construction is a leader in categories where knowledge is essential, including [healthcare](#), [dialysis](#), [retail](#), [restaurant](#), [office](#), and [financial construction](#).

### On-time, on-budget, and quality results.

As a commercial contractor, we carefully manage the planning, purchasing, and construction of projects, holding our work to extremely high standards while delivering projects on time.

### A personal commitment to service.

Our entire team—from our project managers to our company president—is accessible to clients and quickly responds to questions and concerns.

The best indicator that we do things the right way is our record of work, repeat business, and referrals. A large number of new clients come from a current client's recommendation.

We invite you to [meet our project managers](#), review our [construction company's portfolio of past projects](#), and learn more about our business.

## OUR VALUES AS A COMMERCIAL CONTRACTOR

### Accuracy

We prepare precise budgets, meticulously manage projects so that they meet our clients' plans, and implement industry-standard quality control. We also invest in systems and software, such as large-scale bid management databases, to make our work even more exact.

### Expertise

There's little that's "general" about our contracting. Because our work focuses on specific industries, we can leverage our experience to build more efficiently and solve challenges more quickly. Most of Ecker's personnel are also LEED, OSHA 30, and Blue Card certified.

### Availability

Ecker Construction's size is ideal for supporting clients. Each receives a designated project manager and superintendent who know all aspects of the project.

## OUR CONSTRUCTION PROCESS

Every project is unique, but the processes underlying [Ecker's construction services](#) allow us to deliver results reliably:

- 1 Ecker can act as the construction manager, handle commercial contractor responsibilities, or approach the work as a design-build project. With design-build, we provide turnkey operations in which we manage the architecture, construction, and cross-functional communication for the project.
- 2 Once a client decides the role Ecker will serve and accepts our bid, we develop a schedule and estimated budget; bring on subcontractors; handle permitting; and finalize planning.
- 3 During construction, a dedicated project manager coordinates the superintendent and subcontractors. This team lead ensures quality, makes adjustments for cost- and time-savings, and anticipates challenges for faster resolution.
- 4 Superintendents provide project managers with daily reports on job progress, milestones, and delays, and clients receive regular communication about our work. We don't restrict client support to a "9-to-5" work schedule because our clients are rarely 9-to-5 themselves. Instead, we provide email, phone, and in-person information based on when clients are available.
- 5 Ecker Construction conducts extensive quality control tests, both throughout the project and before delivery. This includes third-party testing on materials, workmanship, and engineering. As a result, clients know that our work as a commercial contractor is well-designed, well-executed, and built to spec.

### Build on Trust™.

If your business has a project in one of our specialty categories and is interested in building in Georgia, Florida, South Carolina, North Carolina, Alabama, or Tennessee, we invite you to get in touch.

# HEALTHCARE CONSTRUCTION

From medical practices and urgent care facilities to outpatient offices and acute care centers, Ecker Construction builds high-quality spaces for healing.

Our healthcare construction services lead the Southeast, as owner-practitioners, developers, and architects rely on our expertise, experience, and **proven results**. In addition to our work in **dialysis construction**, we build facilities for:

Medical and Dental Private Practices

Ophthalmology Specialists

Radiology Centers

Ambulatory Surgical Centers

Wellness Care

Ecker Construction can manage a range of projects depending on the client's needs, including ground-up, interior build-out, and remodeling.

## RECENT HEALTHCARE CONSTRUCTION PROJECTS

## OUR EXPERIENCE IN HEALTHCARE CONSTRUCTION

Ecker's **team members** aren't just builders. We work with architects and clients to solve the common challenges that healthcare projects present, such as constructing facilities to ensure accessibility for patients with special needs.

Depending on the project's requirements, Ecker Construction can also provide conceptual estimating and value engineering, applying our knowledge to help control costs.

## ECKER'S COLLABORATIVE APPROACH

Ecker Construction prioritizes the client relationship and considers the business impact of its work. We plan and build healthcare construction projects in a way that:

### Supports patient care.

Our experienced project personnel coordinate with clients so that construction doesn't get in the way of scheduled procedures and so that facilities maintain a welcoming environment for patients.

### Protects patients, staff, and visitors.

Dedicated project managers and superintendents follow detailed safety procedures, and subcontractors are pre-qualified before beginning work on site.

### Makes communication convenient.

Healthcare construction requires a flexible approach. Our team makes itself available based on the client's schedule: answering questions, providing updates, and addressing any concerns.

Clients appreciate how accessible our project managers, management, and principals are throughout their experience. These traits, combined with our focus on high-quality, on-time, and on-budget construction, make Ecker the provider of choice for healthcare construction.

Build on a Foundation of Experience, Expertise, and Client-Focused Service.
